

EAS409 Economic Development

Faculty of Economics and Administrative Sciences – Elective for all faculty

Credit: 3 ECTS: 6

Course Description: This advanced course in Economic Development is designed for all undergraduate students seeking a deep understanding of the economic theories and strategies relevant to development economics. With a focus on sustainability, the course explores various topics, from classic economic growth theories to contemporary development and underdevelopment models. We analyze the multifaceted aspects of economic development, emphasizing its role in addressing global challenges, fostering inclusive growth, and contributing to the United Nations Sustainable Development Goals (SDGs).

Course Outcomes:

- Focus on comparative economic development to analyze the development processes of different countries.
- Develop the ability to understand economic growth and development by examining classical economic growth theories.
- Comprehend economic development and underdevelopment models to analyze factors influencing economic progress and regress.
- Gain the ability to understand the relationship between poverty, inequality, and development by investigating their interplay.
- Evaluate the impact of population growth on economic development by examining demographic factors.
- Enhance the ability to understand the effects of rural-urban migration, its theories, and policy implications on the economy and society.
