

LAR513 Landscape Architecture

Faculty of Agriculture – Compulsory course

Credit: 3 ECTS: 7,5

Course Description: This comprehensive master's course in Landscape Architecture provides students with a profound understanding of environmental dynamics and sustainable design principles, preparing them for impactful contributions to the field. Through a combination of lectures, discussions, and practical assessments, students will delve into crucial aspects of environmental considerations and master the skills required for effective Environmental Impact Assessment (EIA) in landscape design.

Course Outcomes:

- Students will gain a comprehensive understanding of the environmental factors influencing landscape architecture.
- Mastery of diverse environmental definitions and their implications on sustainable design.
- Proficiency in conducting Environmental Impact Assessments for landscape projects.
- Ability to apply mitigation strategies to address environmental concerns in landscape design.
- Effective communication of sustainable design solutions through presentations.
