

SNA255 Museum Education Practices

Ataturk Education Faculty – Elective course

Credit: 2 ECTS: 2

Course Description: This course is designed to explore the significant relationships between sustainable development and education. In today's context, sustainability requires a holistic understanding that encompasses not only ecological but also social and economic dimensions. The course focuses on the fundamental principles and goals of sustainable development and discusses the role of education in achieving sustainability. It aims to provide students with insights into how education can contribute to sustainable development.

Course Outcomes:

- Demonstrate a comprehensive understanding of the key concepts and principles of sustainable development.
- Develop critical thinking skills to analyze the impact of education on sustainable development.
- Articulate connections between education and specific Sustainable Development Goals (SDGs), focusing on SDG 4 and SDG 17.
- Explore and apply best practices in sustainable education, drawing from global examples and success stories.
- Design and implement sustainable education strategies aligned with broader sustainability objectives.
- Gain an interdisciplinary perspective on the interrelatedness of various disciplines in addressing sustainable development challenges through education.
- Enhance communication skills to effectively convey the importance of education in sustainable development to diverse stakeholders.
- Explore ethical considerations related to sustainable development and education.
- Develop collaborative skills through group projects, discussions, and teamwork, reflecting the importance of partnerships in achieving sustainability goals.
- Enhance problem-solving abilities by applying sustainable development principles to real-world challenges.
